Clone Features

Clone Features is a toolbar that allows copying and pasting a selected feature's attributes to any number of features from the same feature class. Specialized buttons are included for copying only the standard required attributes between TDS transportation features.

User Instructions

Step 1: Start an editing session.

Step 2: Select a single feature and click either Set Feature Template or Set Transportation Template to copy its attributes.

-Set Transportation Template will only function if a cart track, trail, or road is selected.

Step 3: Select features that the attributes will be pasted to and click either Apply Feature Template to Selection or Apply Transportation Template to Selection .

Technical description of Apply Transportation Template to Selection
This button will change the F_CODE and FCSubtype of any selected roads, cart tracks, and trails to match the template feature. Other feature types in the selection, such as bridges or those from other classes, are ignored by this tool.

For selected features targeted by this tool, the original CWT, LOC, RLE, SBB, and ZI026_CTUU are retained. Additionally, populated metadata fields such as ZSAX_RS0, ZI001_SPS, and VERSION are not modified. All other attributes are set to default values for the feature type.

Depending on the template feature's FCODE, the following required attribution is then pasted from the template feature to all selected features:
Road
ACC **|** FCO **|** LTN **|** MES **|** MWG
ONE **|** PCF **|** ROR **|** RTY **|** RIN_ROI
SEP **|** THR **|** ZI016_ROC **|** ZI016_WTC
Cart Track
ACC **|** PCF **|** TRS **|** WID **|** ZI016_WTC
Trail
ACC **|** PCF **|** WID **|** ZI016_WTC

Please contact me with any questions, feedback, or bugs encountered.
